

## EXERCISE 1

Fill in the blanks with the words in the box. Read the article for hints.

1. The Earth's \_\_\_\_\_ point is known as the Challenger Deep located in the Mariana Trench.
2. Challenger reached Mariana Trench as part of their first global \_\_\_\_\_ cruise.
3. Mariana reaches a depth of almost eleven thousand metres at a small slot-shaped \_\_\_\_\_.
4. The Challenger Deep is named after the H.M.S. Challenger \_\_\_\_\_ vessel.
5. In 1960, a Swiss scientist, Jacques Piccard and Navy Lt. Don Walsh were the first two people to \_\_\_\_\_ into Challenger Deep.
6. The Kaiko was a rather \_\_\_\_\_ vessel that enabled scientists to gather important data without the need to endanger a human diver.
7. Nereus, remained at the \_\_\_\_\_ for almost ten hours.
8. The Challenger Deep is highly \_\_\_\_\_ due to its extreme depth.
9. The sea floor contains \_\_\_\_\_ that bubble up liquid sulphur and carbon dioxide.
10. There are also active mud \_\_\_\_\_ and marine life that have adapted to pressures a thousand times more than at sea level.
11. The three most common \_\_\_\_\_ here are xenophyophores, amphipods and holothurians.
12. Xenophyophores look like giant \_\_\_\_\_, while amphipods are shiny, shrimplike scavengers and the holothurians are a new species of translucent sea cucumber.

## LEARNING ACTIVITY

Discuss the various underwater submersibles that are used to explore very deep places at the bottom of the Ocean based on the pictures provided below.
